

Happily Ever After: Specification and Care Best Practices for Indoor Performance Fabrics

A 1-Hour CEU Course:

Performance textiles for contract design have characteristics that many specifiers require. There are many options to meet varying aesthetic and practical design needs. This course clarifies which ones will work best where, and how to keep them brilliant and resilient long into the future.

Specifiers Will Learn:

- Fiber types used in textile manufacturing and their inherent characteristics
- Ways to identify and select from evolving textile technology options
- Marrying the correct specific performance characteristics and optimal fiber content to different design project requirements, sectors and applications
- Essential questions to ask before specifying
- How to tell which performance tests were done on a textile and knowing which are important
- Cleaning codes, schedules and methods for indoor performance textiles
- Connect the changing use patterns of commercial spaces with a forecast of aesthetic textile trends and applications
- The future-changes that have already begun and a small sampling of what's next in design

CEU Event Information

- Official registration of your course date, time and location with IDCEC
- 1 hour of Continuing Education Credit encompassing the following organizations: (ASID, IIDA, CIDA, IDEC, CIDQ, DSA, IDS)

To schedule a CEU, contact Director of Outreach, Kelly Ponder kelly@crypton.com
